Results-driven Data Engineer with 4.5+ years of experience building high-volume, production-grade data platforms for BI and analytics. Expert in AWS-native ETL, PySpark-based transformations, and Redshift data warehousing. Proven record of improving pipeline reliability, performance, and cost efficiency in enterprise environments. Strong hands-on ownership mindset with end-to-end delivery across ingestion, orchestration, validation, and monitoring.

Experience

NEWGEN TECHNOMATE LLP

Jan 2024 - Present

Data Engineer

Remote

- Designed and deployed fully serverless ETL pipelines using PySpark, AWS Glue, Step Functions, and Lambda for analytics workloads.
- Built scalable **S3 → Glue → Redshift** pipelines handling structured enterprise datasets with optimized schema design and partitioning.
- Automated end-to-end workflow orchestration using Step Functions + **Lambda**, eliminating manual job triggers and reducing operational failures.
- Developed SQL + PySpark-based **data validation and reconciliation framework** to ensure upstream vs downstream data accuracy.
- Implemented **CloudWatch logging, alerting** for proactive pipeline failure detection monitoring.
- Collaborated closely with BI teams to deliver **production-ready datasets for real-time dashboards**.

Tata Consultancy Services (TCS)

Jan 2022 - Dec 2023

Programmer

Pune, India

Data Engineering:

- Key contributor to a large-scale **on-prem to AWS cloud data modernization program**.
- Built and supported production ETL pipelines using **AWS Glue, S3, Redshift, Athena, and EMR** for enterprise analytics platforms.
- Developed and optimized **Athena-based validation queries** for schema checks, completeness, and transformation integrity.
- Automated ETL orchestration using **Lambda and Step Functions**, removing dependency on manual scheduling.
- Managed **IAM roles, fine-grained permissions, and CloudWatch monitoring** for secured, auditable pipelines.
- Worked on **PySpark-based transformation jobs** to improve large-scale data ingestion performance and consistency.

Technical Support (L1/L2):

- Delivered production support across **Linux and Windows** systems with log analysis and service monitoring.
- Performed access control, permission management, and operational troubleshooting on Linux servers.

Octrans Technologies

May 2021 - Dec-2021

Frontend Developer

Remote

- Developed reusable React components and implemented basic state management.
- Integrated frontend screens with REST APIs and handled form validations.
- Fixed UI bugs, improved responsiveness, and followed basic Git workflows.
- Collaborated with backend teams to understand application data flow.

Projects

Retail Data Analytics Pipeline

Tech: AWS Glue, S3, Redshift, Athena, DMS, Step Functions, Lambda, PySpark, Linux

- Built an end-to-end **serverless retail analytics platform** ingesting data from SQL Server into S3 using AWS DMS.
- Implemented PySpark-based Glue transformations to generate curated analytics datasets.
- Enabled high-performance BI reporting using **Redshift and Athena** on transformed data.
- Automated orchestration using **Step Functions and Lambda**.
- Implemented monitoring using **CloudWatch** and production-grade Linux troubleshooting.
